

**Meeting on Variable Stars  
Michigan State University  
March 27, 2010**

1:00pm **40 years of Variable Star Astronomy with the Michigan State University Campus Telescope** (Horace Smith, Michigan State University)

1:20pm **The Z CamPaign** (Mike Simonsen, AAVSO)

1:40pm **Light and Velocity Variability in Post-AGB Stars** (Bruce Hrivnak, Valparaiso University)

2:00pm **Properties of W UMa Stars from the Calvin College Catalog** (Larry Molnar, Calvin College)

2:20pm **Long-term Spectroscopic Monitoring of Rigel (beta Ori, B8Ia)** (N. D. Morrison and S. J. Rother, The University of Toledo)

2:40pm – 3:05pm **Break/Discussion**

3:05pm **Discussion of Posters**

3:15pm **Long Period Variable Stars in Galactic Globular Clusters: A New Survey** (Andy Layden, Bowling Green State University)

3:35pm **RR Lyrae in LMC Globular Clusters** (Charles Kuehn, Michigan State University)

3:55pm **Photometry of White Dwarf Variables** (Robert Miller, Michigan State University)

4:15pm **Analysis of Variable Star Observations With Missing Data** (David Corliss, The University of Toledo)

4:35pm **Long Period Variable Stars in the Globular Cluster NGC6553** (Elisabeth Kager, Bowling Green State University)
